DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-59 and 66, drawn to a method for correcting errors, classified in class 702, subclass 19.
- II. Claims 60-65, drawn to a method for generating a differential profile, classified in class 702, subclass 19.

The inventions are distinct, each from the other because of the following reasons:

The methods of Inventions I and II can be shown to be distinct because they are physically and functionally different, and are not required one for the other. In the instant case of distinct inventions, each method has a different goal and method steps. The method of Invention I is drawn to correcting errors in a profile and the method of Invention II is drawn to generating a differential profile. Invention I comprises steps of calculating an average reference profile, determining a differential reference profile, and generating an error-adjusted experimental profile. Invention II comprises a step of calculating a differential profile A v. B. Thus, the Inventions comprise steps requiring manipulations of data that are not required for the other method.

Because these Inventions are distinct for the reasons given above, and the non-patent and patent literature search required for each group is not coextensive with that requirement for another group, restriction for examination purposes as indicated is proper.

Art Unit: 1631

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marina Miller whose telephone number is (571)272-6101. The examiner can normally be reached on 8-6, M-Thu.
